Dangerous Grimorous

Javascript for Image Swaps in the Primary Navigation

Copy and paste this code into the <head> section of your html file:

Add this coding pattern for each image swap:

```
<a href="filename".html"><img src="images/imagename.jpg" width="160" height="31"
alt="description of image" id="IDname" onmouseover="changeImage('IDname','IDname');"
onmouseout="changeImage('IDname','IDname')"></a>
```

Example:

Note: All your button images will have the same image file compression. Consider whether you need to amend .jpg to .png or .gif in your .html file
